

Terminator Pest Control

COVID-19 Disinfectant treatment

Terminator Pest Control can confirm the product we use has successfully passed test BS EN 14476 (2005) – Chemical disinfectants and antiseptics – Viricidal quantitative suspension test for chemical disinfects against CORONAVIRUS.

The test that was carried out at an independent UKAS accredited facility by one of the world's leading virologist, demonstrates that the product possess significant viricidal activity again CORONAVIRUS.

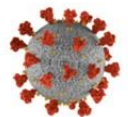

This product contains the best antimicrobial cleaning agents combined with fantastic disinfecting agents which clean and also prevent bacterial build up. Not only does the chemical clean and disinfects, it applies a fighting residual barrier.

The treatment is carried out using an ultra-low volume (ULV) machine which produces tiny droplets. These droplets will penetrate cracks, crevices and cover all areas. After the treatment has been carried out, the area shouldn't be entered for up to two hours after the treatment has dried.

Our disinfectants are successfully accredited to BS EN 14476 (2005) standard which confirms the product kills the Coronavirus and is also proven to successfully kill other deadly diseases including Ebola, Swine Flu, C Difficile Spores, MRSA and E.Coli, and has already been used successfully by charities in countries including Sierra Leona where deadly outbreaks of Ebola have occurred.

- Achieves a 99.9999% kill rate against the Coronavirus and bacteria's
- Prevents a bacterial, fungal and viral build up
- Applies a fighting residual barrier
- Removes risk of cross contamination
- Safe on skin as well as other surfaces including all hard surfaces, plastics, keyboards etc
